You must use version</i></p>

### HISTORY

The J710 was the last new model from Umax -- and only about 50 were ever produced. Combining the form factor of the compact C500 (below monitor in photo) with the power of 604e or G3 , the J710 would have been great for power users on a budget. About 90% shipped with the 200 MHz 604e. The G3 models were for internal use only.

Although Apple certified the model for sale, their refusal to renew Umax's license to produce Macclones lead Umax to abandon the J710.

The J710 looks just like the C500, the computer beneath the monitor in this photo. It also uses the same ZIP (or PEZ) socket for processor
