LaserWriter IINT

Overview

The Apple[®] LaserWriter[®] IINT, which combines high resolution with the ability to produce fullpage text and graphics, is Apple's mainstream network laser printer for both individuals and workgroups.

The LaserWriter IINT printer offers individuals or users linked

through an AppleTalk® network the versatility needed to produce a wide variety of near-typesetquality documents—from letters, memos, and reports to sophisticated text and graphics output, including artwork, illustrations, page layouts, and presentations. It features 11 font families (35 typefaces): Times®, Helvetica®, Courier, and Symbol, along with ITC Avant Garde Gothic[®], ITC Bookman[®], New Century Schoolbook, Helvetica Narrow[®], Palatino[®], ITC Zapf Chancery[®], and ITC Zapf Dingbats[®].

Features

Benefits

 Full-page, high-resolution text and graphics 	Provides 300-dot-per-inch resolution over the entire page for high-quality documents.
 Motorola 68000 processor 	 Allows high-performance printing at up to 8 pages per minute.
 2 megabytes of RAM 	 Improves performance when using multiple fonts. Provides flexibility for the addition of down- loadable fonts.
 Wide selection of built-in fonts 	 Features 11 type families in an unlimited range of sizes and styles.
 PostScript[®] support 	 Offers virtually unlimited versatility in creating and manipulating text and graphics. Works with any software that outputs PostScript-compatible files, including virtually all Macintosh® applications, some Apple IIGs® programs, some MS-DOS and OS/2 applications, and many AT&T UNIX® programs (requires additional software). Provides an upgrade path for your documents; proof them on a LaserWriter IINT printer, then output the final masters on a PostScript typesetter without rekeying.
 AppleTalk Network System interface 	 Allows access by up to 31 users for cost-effective printing. Allows printing from an Apple Macintosh (minimum 512K of RAM), an Apple IIGs, or an MS-DOS or OS/2 computer (using the LocalTalk[™] PC Card).
 Background printing 	With the MultiFinder [™] software, allows you to continue work on your Macintosh system while printing.
▶ Diablo 630 emulation	Allows nearly any computer with an RS-232 interface to connect directly and produce high- quality text output.
 LaserWriter family print engine 	► Uses the second-generation engine common to all LaserWriter II models, offering a logical upgrade path.
 Versatile paper handling 	 Comes with choice of face-down or face-up output trays. Offers adjustable manual feed. Features interchangeable paper trays for different paper sizes.
 Print-media versatility 	Lets you print on almost any material— including standard photocopy paper, letterhead, labels, envelopes, and transparency film—for maximum flexibility.
 Improved toner system 	 Offers darker blacks and longer life than previous LaserWriter cartridges.

Product Details

PostScript

PostScript is an industrystandard "page description" language: it tells a printer precisely where to place text and graphics on the page, allowing fonts to appear in any size, style, and orientation, and offering virtually unlimited graphics capabilities. PostScript is one of the most powerful and versatile page-description languages available.

Virtually all software for the Apple Macintosh system creates PostScript-compatible output files. There are also PostScriptcompatible applications for the Apple IIGs system and for MS-DOS or OS/2 compatibles. If you are working with AT&T UNIX, you can use the Tran-Script utility available from Adobe Systems to convert files to PostScript format for printing on the LaserWriter IINT.

When you require higher resolution or more pages per minute, or need to use larger or heavier paper stock than the LaserWriter IINT can handle, you can print your documents on any typesetter that has Post-Script capability, without retyping the text or re-creating the graphics.

Using a LaserWriter IINT with MS-DOS or OS/2

There are several ways to print on a LaserWriter IINT system from an MS-DOS or OS/2 compatible computer:

► AppleTalk. Adding a Local-Talk PC Card to an MS-DOS or OS/2 computer gives you access to all of the LaserWriter IINT printer's text and graphics capabilities over the AppleTalk Network System.

▶ PostScript-compatible software. An increasing number of MS-DOS or OS/2 applications support the PostScript pagedescription language. You can print on the LaserWriter IINT from these applications simply by connecting your computer to the printer's RS-232 port. ► Other MS-DOS or OS/2 software. You can also print documents on the LaserWriter IINT from other MS-DOS or OS/2 applications via RS-232 connection using Diablo 630 emulation mode. (See the LaserWriter IINT and LocalTalk PC Card user's guides for further details on these options.)

Upgrade Options

Your LaserWriter IINT can be upgraded to a LaserWriter IINTX by your authorized Apple dealer.

LaserWriter IINT

System Requirements To use the Apple LaserWriter nected via the LocalTalk Any other computer with an IINT printer, you must have one Cabling System.
